

# Because paving perfection demands the finest tools.

Nearly 25 years ago, Carlson began designing and building innovative, easy to operate finishing systems for the paving industry. The Carlson EZ Screed IV carries on that commitment to excellence by providing contractors with an exceptional tool for creating the perfect finishing touch.

The EZ Screed IV incorporates innovative design ideas that enable paving contractors to attain the highest levels of quality in their finished product and allow operators to work in greater comfort and safety.

## **Carlson EZ Screed IV**

*The EZ Screed IV, with its front mounted hydraulic extensions, gives paving contractors up to 19 feet of paving width with full heat and vibration. Add 6 feet more with heated bolt on extensions for a total of 25 feet.*

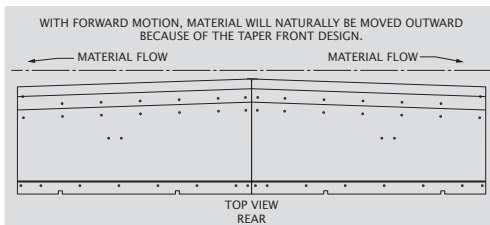

# Carlson delivers the perfect touch.

## Electric heat for quality control and operator safety.

Advanced design heating elements in contact directly with the upper surface of the main screed plate to deliver even, controllable heat. This ensures consistent fluidity and smooth laydown of the asphalt. This also helps contractors meet clean air standards by getting rid of the smoke created by diesel flame heated screeds. And it eliminates the maintenance costs you'll have to pay to repair warped screed plates and burner boxes.

## Front taper design for uniform distribution.

*The EZ Screed IV's patented front taper design helps you create smoother roads, parking lots and other high use surfaces by constantly moving material to the outside. It prevents cold spots and maintains an even head of material for a perfect mat.*

## Adjustable slide track supports the heated extensions for paving wider roads.

A unique feature of the Carlson EZ IV Screed is the extension support system that uses high strength chrome rods with adjustable composite bushings to maintain tight control and prevent vertical movement. Carlson's innovative adjustable angle of attack produces a mat quality consistent

with the main screed in texture and density. It also allows for extensions to slope down 8%.

## Innovative berm builder adds value and versatility.

Carlson's industry acclaimed, adjustable berm builder enables contractors to offer economical drainage control by creating jointless asphalt curbs and gutters.

The heated beveled edger plate for tapered notched wedge joint increases job site safety and provides a stronger longitudinal joint.

## A PROVEN ALL ELECTRIC HEAT SYSTEM with a 34kW generator has enough power to let you heat and run lights so you work late into the night.

## Ergonomically friendly work environment.

Dual control stations and a wide walkway give operators the ability and room to work efficiently and move safely around the EZ Screed IV.

## Home cooked meals.

The crew's favorite feature on the EZ IV could well be the built in oven that gives them a place to heat up their lunches. All the comforts of home. (Well at least one.)

### SPECIFICATIONS

Model	EZIV-815	EZIV-1019
Standard Paving Width	8 ft. (2.44m)	10 ft. (3.05m)
Extended Paving Width	15 ft. (4.57m)	19 ft. (5.79m)
Extension Length	4 ft. Right 3 ft. Left	5 ft. Right 4 ft. Left
Max. Paving Width with Bolt-On Extension	19 ft. (5.79m)	25 ft. (7.62m)
Vertical Height Adjustment	Hydraulic	Hydraulic
Extension Slope Down	8%	8%
Maximum Berm Height	4 in. (10.16cm) on outside edge	
Berm Width Available	12 in. (30.48cm), 18 in. (45.72 cm) or 24 in. (60.96 cm)	
Power Crown	2-1/2 in. (6.25 cm) Positive 3/4 in. (1.9 cm) Invert	
Walkway Width	20-1/2 in. (52.07 cm) Hinged	
Oven	Electric Stove Top Element	
Power Outlets	120 Volt @ 1200 watts (Optional 4800 additional watts for lights)	
Screed Weight	6,250 lbs	7,000 lbs
