

Roadmaster

The RoadMaster screed is a new addition to the line of screeds produced by Carlson Paving. The RoadMaster is designed to better fit the smaller highway class pavers. This smaller screed is well suited for work including driveways and parking lots, and is still capable of paving highway class jobs. With electric heat, and hydraulic vibration, this full spec. screed will fit a smaller highway class paver, complimenting and enhancing its paving ability. The ease of operating a RoadMaster Screed, along with the simplicity of service and adjustments make it a winning choice for contractors everywhere.

RoadMaster Specifications

8' to 15' standard paving widths.

Full electric screed heat system.

Automatic thermostat control circuit stops heating when screed bottom reaches 330 F, and re-starts heat cycle when heat drops below 300 F.

Machine base weight 4000lb

Manual vertical height adjustments.

Two tool boxes standard, capable of holding tools, paint, string lines, or most other commonly used items on the job site.

Wide width walkways for operator safety and comfort.

Fold down side walkways for easier access to screed while paving wider widths.

10Kw hydraulically driven generator for screed heat.

400 Brinell screed plates.

Optional hydraulic power vertical height.

Optional accessory power outlets available.
